# OER Recipe
## A Framework for Creating or Adapting OERS

### The Recipe

An overview of the ingredients — the steps to follow.

### Ingredients

- **Curators** – the participants
- **Project manager**
- **Course objectives**
- **OER to customize**
- **Schedule for project**
- **Software platform or space for editing**
- **Platform for sharing final content**

### Pre-Production

1. Identify need and audience
2. Recruit participants and appoint project manager
3. Identify course objectives and select OER materials to use. Map objectives to OER
4. Consider format, platform, UDL and structure of text
5. Define and assign roles. Who is responsible for what?
6. Identify sections that need to be edited or replaced. Rewrite or find appropriate CC-licensed materials to embed

### Production

7. Identify software platform. Create or identify a template to use. Factor in step 4 considerations
8. Customize content. Write, edit and find new content. Seek out and use appropriate CC-licensed materials as appropriate
9. Create or locate supplementary resources for the new OER
10. Give Project Manager changes, additions and updates for the new OER work. Project manager acts as managing editor for project

### Post-production

11. Copyediting review
12. Layout review / UDL. Check for consistency with template and UDL principles
13. Check license status and citation of all CC materials. Create new copyright details page for resource
14. Hyperlink sections and glossary/ index
15. Publish/ Share the content
16. Declare project complete and release to audience. Share information about how to access the new OER
